```
5. .NET CORE WEB
5.1.0 ENCAMINHAMENTO (ROUTING)
□ O Mapeamento ...
  ■ dentro do padrão é uma combinação de controlador + acção + parâmetros
☐ Algoritmo:
  O primeiro emparelhamento ganha (first match wins)
□ As regras de encaminhamento ...
  ■ são definidas no método Configure da classe Startup
  // Código omitido
// Method called by the runtime. Use it to configure the HTTP request pipeline.
public void Configure(IApplicationBuilder app, IWebHostEnvironment env) {
     Padrão do caminho (route pattern)
```
